Hey, I'm just doing a quick survey on how people use AI and whether we can actually trust what it says. Is it okay like if I record this, it's just so I can get your answers down correctly? Yeah, yes, yes. Okay, so here are our questions.

What do you use AI for in your daily life or like just for your studies or what? Yes, I use it for brainstorming ideas and getting quick explanations. When it gives you an answer, do you usually just trust it or do you feel like you have to double check everything? I rarely trust it fully. It's just a starting point.

Has an AI ever told you something totally wrong but it kept acting like it was 100% correct? How did you handle that? Yes, especially with audited information. Okay, does the AI ever make you doubt yourself like you knew the answer but the AI was so confident that you started to think that you were the one who was wrong? Definitely, which is why I stay cautious. Okay, where do you personally draw the line between using AI for help and it becoming like cheating? If I submit AI work without reviewing, that's cheating.

If you use AI for something important and it gave you the wrong information, who do you think is actually responsible you or AI? The user is responsible. AI is just a tool. Okay, do you think relying on AI is making it harder for us to think for ourselves or is it just a better way to learn? Yeah, it can make people lazy thinkers if relied on too much.

Okay, have you ever felt forced to use AI just because everyone else is using it or you don't want to fall behind? Not really forced but it's becoming the norm. Okay, how do you feel when you have to do a task without any AI? Does it feel harder to focus or get started? Harder but it's probably better for long-term learning. Okay, which AI platform or apps do you actually use the most? Mostly chatGPT.

Okay, that's all. Thanks a lot for helping. I really appreciate your time.
