Okay. So, hi Vaidik. Hi.

Yeah. Thanks for helping out. I will just take a quick survey and I am recording it to keep track of your answers.

Yeah. Okay. Okay.

So, the first question is, you know, are you aware of AI? Do you use AI? Yeah, I am aware. I use it regularly mostly. Okay.

Do you usually use AI in your daily life or for your studies? I mostly use AI for studying, like understanding difficult topics and summarising notes. Okay. And sometimes with assignments too.

I also use it when I need quick explanations instead of searching everywhere. Okay. So, mostly for studies? Yeah.

Okay. So, when it gives you an answer, do you usually trust it or do you feel like you have to double check everything? I do not fully trust it. If it is something important, I usually double check, but for basic stuff, I just go with it.

Yeah. Okay. And has an AI ever told you something totally wrong, but kept acting like it is 100 percent correct? You know, how do you handle that kind of situations? Yeah.

It has happened many times before. It sounded really confident, but was actually wrong. So, I only realised later when I checked somewhere, somewhere else.

So, I now try to verify important answers. Does the AI ever make you doubt yourself? Like you know the answer, but AI is so confident that you kind of doubt your own, you know, answers? Yeah. Yeah.

Sometimes if I am not fully sure about something and AI gives a confident answer, I start second guessing myself. All right. So, and where do you personally draw the line between using AI for help and when does it become cheating? For example, assignments or anything? I think using AI to understand concepts or get guidance is fine, but if you are just copying answers without understanding, then it becomes cheating, right? Yeah.

That is true. If you used AI for something important and it gave you the wrong info, who do you think is responsible? You or AI? I think ultimately it is my responsibility because I chose to rely on it, right? Yeah. Yeah.

So, AI is just a tool. Do you think relying on AI is making it harder for us to think for ourselves or is it just a better way to learn? I think it can go both ways. If you use it properly, it helps you faster, but if you depend on it too much, it can reduce your ability to think on your own.

Have you ever been forced to use AI because everyone else is using AI, so you do not want to be left behind? Yeah, a little. When everyone around you is using it, it feels like you might fall behind if you do not. Yeah, that is true.

Lots of us feel the same way. How do you feel when you have to do a task without any AI? Since you always use AI, do you feel that it is harder now to do a task without AI? Yeah, it definitely feels harder, especially to get started. I feel like I have gotten used to having that quick help.

Yeah, okay. Which AI platforms or apps do you usually use? I mostly use ChatGPT, Gemini, DeepSeek, and all. Okay, that is good.

Thanks, that is all. Thank you. Yeah.
