Hey, thanks for helping me out. I'm just doing a quick survey on how people use AI and whether we can actually trust what it says. Is it okay if we record this? Yeah, it's fine.

What do you use AI for in your daily life? I mainly use AI for my studies, especially to understand difficult topics like coding, physics and mathematics. It helps me with explanations and summaries. I also use it for daily tasks like writing or getting quick info on something.

When it gives you an answer, do you trust it or double check? I don't trust AI answers completely, especially for important topics. I use it as a guide but always double check with books or reliable sources because sometimes it can give incomplete information. Do you think relying AI is making it harder for us to think? I do think that AI can affect thinking if we depend on it too much, but if we use it properly to understand the concepts and learn step by step, it can actually improve our knowledge and make learning easier.

Where do you draw the line between help and cheating? I believe that using AI for understanding concepts and getting ideas is helpful, but copying the answers directly without learning or putting effort is cheating. So the difference depends on whether we are learning or finishing the work quickly. Thank you for giving interview.

Thank you.
