Hey, I'm just doing a quick survey on how people use AI and whether we can actually trust what it says Is it okay if I record this? It's just so I can get your answers down correctly. Yes All right. So What do you usually use AI for in your daily life or for your studies or for what? Almost everything work, writing, planning, editing my videos, etc Okay, when it gives you an answer Do you usually just trust it or do you feel like you have to double-check everything? Yes, I have to double-check everything because I don't trust it All right.

Has an AI ever told you something totally wrong, but kept acting like it was 100% correct? How did you handle that? Yes, but I've learned to catch mistakes Does the AI ever make you doubt yourself like you knew the answer but the AI was so confident that you started to think You were the one who was wrong. Yes, especially when it sounds very confident Okay Where do you personally draw the line between using AI for help and it becoming cheating? It's cheating only if it's used blindly If you use AI for something important and it gave you the wrong information, who do you think is responsible AI or you? Obviously me mostly the users responsible leaders Okay Do you think relying on AI is making it harder for us to think for ourselves or is it just a better way to learn? It's a better way to learn if you use it actively Have you ever felt forced to use AI because everyone else is using it and you don't want to fall behind? Yes, especially in tech related environments Okay, how do you feel when you have to do a task without any AI, does it feel harder to focus or get started? Yes, it's hard to focus. It feels inefficient compared to using AI Which AI platforms or apps do you actually use the most? I use Gemini and ChatGPT Okay, that's all.

Thanks a lot for the help. I really appreciate your time
