

FOR TRANSCRIPT – 9:

EXPLANATION :

The interview conversation most closely matches the Startup Founder / Young Professional proto-persona (Rahul Mehta) because the participant mainly uses AI for searching information, emails, and general productivity purposes rather than academic learning or technical development. The participant shows a cautious and practical attitude toward AI by clearly stating that they do not trust AI outputs without verification and rely more on their own judgment while using AI tools. They are aware that AI can confidently provide incorrect information and therefore use it carefully and responsibly. The participant also believes that AI becomes unethical when it replaces original thinking, which strongly reflects awareness about ethical AI usage and maintaining personal responsibility. Additionally, the participant recognizes that excessive AI dependence can make people overly reliant on technology, while personally not feeling pressured to use AI simply because others are using it. Overall, the conversation reflects a balanced, independent, and productivity-oriented mindset that closely aligns with the behaviors, awareness, and attitudes described in the Startup Founder / Young Professional persona.

FOR TRANSCRIPT – 10:

EXPLANATION :

The interview conversation most closely matches the Senior Software Engineer proto-persona (Arjun Verma) because the participant demonstrates a highly analytical and cautious approach toward AI usage. The participant mainly uses AI for brainstorming ideas and getting quick explanations while clearly stating that AI should only be treated as a starting point rather than a completely trusted source. They are highly aware of misinformation, confidently incorrect AI responses, and the importance of reviewing AI-generated work before accepting or submitting it. The participant also believes that users themselves are responsible for verifying AI outputs and recognizes that excessive dependence on AI can reduce independent thinking and long-term learning ability. Additionally, they acknowledge that AI tools are becoming the norm in modern workflows, but they still value critical thinking and careful evaluation. Overall, the conversation strongly reflects the skepticism, responsibility, and critical-thinking mindset described in the Senior Software Engineer persona.

FOR TRANSCRIPT – 11:

EXPLANATION :

The interview conversation most closely matches the Startup Founder / Young Professional proto-persona (Rahul Mehta) because the participant mainly uses AI for workplace productivity tasks such as summarizing documents, handling emails, conducting quick research, and improving efficiency in professional work environments. The participant demonstrates moderate trust in AI by verifying important information and cross-checking factual data using other sources, which shows awareness of AI limitations and misinformation risks. The participant also recognizes that AI can sometimes present information very confidently and become misleading, which reflects practical experience with AI tools in real-world work situations. They believe AI becomes unethical when it replaces personal understanding and independent thinking, while also acknowledging that overreliance on AI can reduce critical thinking skills. Additionally, the participant feels some professional pressure to keep up with AI adoption trends in the workplace, which strongly aligns with the behaviors, goals, and concerns described in the Startup Founder / Young Professional persona.
