Hi, thanks for helping me out. I'm just doing a quick survey on how people use AI and I would actually wanted to ask you a few questions about it. So what do you usually use AI for in your daily life or for just for you use it for your studies? Mainly I use AI for my studies where I ask it to pass through some files to give me more context on what I should focus on or like bullet points on how I should go through it.

Okay, when it gives you an answer to usually just trust it or do you feel like you have to double check everything? Usually I do double check it because AI hallucinates a lot, but with better and better models like Claude Opus 4.6 and Sonnet 4.6, I usually don't check through them most of the time unless they gave me a really extreme or suspicious answer. Okay, as an AI ever told you something that is like totally wrong, but kept acting like it was 100% correct. How did you handle that? Yeah, AI hallucinated a lot when I was doing my research on biosensors and it kept on insisting that there was a certain sequence of aptamers.

Aptamers is basically like a short DNA sequence. So it kept on insisting that this short DNA sequence was present in this research paper I fed it through it, but I rechecked the paper and it was definitely not there. Yeah, it is there.

It is there unless I pressed it. And after that it said, oh no, I must have imagined this. I took this sequence from a random paper which applies everywhere.

Do you think relying on AI is making it harder for us to think for ourselves or is it just a better way to learn? Yeah, definitely. I know a lot of people who just blindly ask AI for literally any sort of problem like, oh, no, there will be some like, he'll have a cold and then he'll ask AI like, oh, what will happen? Will I be okay? And all like people lose their critical thinking ability relying on AI. Have you ever felt forced to use AI just because everyone else is using it and you don't want to fall behind? No, I was always an early adopter for AI because I always wanted to elevate my research and just general workplace.

No. Okay. How do you feel like when you have to do a task without any AI? Does it feel harder to focus or get started? See, the way I use AI is not traditionally how other people use AI because I don't just tell AI to make notes for me or something.

So it doesn't hinder my ability to study per se. But the way I use AI is to look for certain parameters or like sequences, let's say. So, I think it'll hinder my ability to like quickly pass through research papers, but just for productivity to just study, I don't think it will affect my ability a lot.

Yeah, cool. Which AI platforms or apps do you usually use the most like Chargivity, Gemini and

Cloud, etc? Right now, I mainly use Cloud and Gemini. Okay, that's all I think.

Thanks for your help. Alright, okay. Good to talk to you.
